

A New Level of Protection.

Introducing the GUARDIAN™ Shield.

Air Sentry® introduces the GUARDIAN™ Shield Wash Down Cap for the most extreme conditions. It's an extra protective barrier between your GUARDIAN™ unit and excessive dust and moisture.

The GUARDIAN Shield is designed for environments where frequent wash down of equipment is required. Or for outdoor and mobile applications where wind and driving rain are factors. Covering all check valves in the top cap makes GUARDIAN well suited to prevent any high pressure spray or rain from entering.

It is also ideal for extremely dusty or dirty environments like mining operations or pulp and paper facilities. Excessive dust or sludge can settle on exposed surfaces and potentially cause check valves to clog or stick.

Even in the most extreme conditions, the GUARDIAN™ Shield Wash Down Cap helps extend desiccant life. And it fits on Air Sentry GUARDIAN, X and XR series breathers.

The GUARDIAN™ Shield Wash Down Cap

- Extends breather life
- Lowers maintenance costs
- Ideal for extreme conditions

*The gold standard in
contamination control*
